

Data Community Conference

As a Speaker

The community that talks about

Data Platforms &
Data Infrastructure

About the event

The Community

It is sometimes challenging to make the right choices to get the most out of data. The options are numerous, and the choice becomes even more complex in a context of fast-paced development and innovation. This event aims to provide a neutral and up-to-date view on various technologies and topics around data platforms and infrastructure. It is also an opportunity to bring the data community together as we are convinced that extended networks and group synergies have a great role to play in this field.

About the event

The 4 pillars of the event

1. Multi-technological
2. Community oriented
3. Neutral points of view
4. Sales pitch not welcome
